

## NASA Headquarters Perspective on Satellite Precipitation Measurements

Will McCarty, Aaron Piña, Tsengdar Lee

Earth Science Division, NASA Headquarters

NASA has a multi-decade history regarding the measurement of precipitation from space, as well as in supporting the underlying science targeting those observations. This presentation will provide a programmatic update on agency activities regarding the remote sensing of precipitation. Included in this will be a perspective of historical, current, and future missions. Additionally, the role of precipitation measurements in the context of both the Weather and Atmospheric Dynamics Focus Area and the broader perspective across NASA's Earth Science portfolio will be discussed.
